UNIVERSITY MANAGEMENT SYSTEM

A Project report submitted to

SHABBIR ANSARI

HIERANK BUSINESS SCHOOL

In partial fulfillment of the Requirements for the award of the Degree of

BACHELOR OF COMPUTER APPLICATION

by

SHABBIR ANSARI – 230879000217

Under the esteemed Guidance of

Ms. Monika Bhatia

Assistant Professor

DEPARTMENT OF COMPUTER APPLICATION

HIERANK BUSINESS SCHOOL

(AFFILIATED TO CHAUDHARY CHARAN SINGH UNIVERSITY)
APPROVED BY AICTE

2026

CERTIFICATE

This is to certify that this is the bonafide record of the Major Project entitled **"University Management System"**, submitted by **Shabbir Ansari – 230022806** of Bachelor of Computer Application in the partial fulfillment of the requirements for the degree of Bachelor of Computer Application during the year 2025-2026. The results embodied in this major project report have not been submitted to any other university or institute for the award of any degree or diploma.

Internal Guide	**Head of the Department**
Guide Name: Ms. Monika Bhatia	**Dr. Anand Kiran**
Designation: Assistant Professor	**Associate Dean (H.O.D)**

External Examiner

ACKNOWLEDGEMENT

We feel honored to place our warm salutation at our college Hierank Business School giving us an opportunity to do this Project as part of our BCA Program. We are ever grateful to our **Chairman, Shree Rajesh Sahay, Principal (UG), Dr. Ashutosh Mishra and Dean (UG), Dr. Swati Singh** who enabled us to have experience in engineering and gain profound technical knowledge.

We express our heartiest thanks to our **HOD, Dr. Anand Kiran,** for encouraging us in every aspect of our course and helping us realize our full potential.

We would like to thank our **Project Guide, Ms. Monika Bhatia,** for her regular guidance, suggestions and constant encouragement. We are extremely grateful to our Project Coordinator **Ms. Monika Bhatia** for her continuous monitoring and unflinching cooperation throughout project work.

We would like to thank our **Class In-charge Ms. Anjali Jagtiani,** who despite being busy with her academic duties took time to guide and keep us on the correct path.

We would also like to thank all the faculty members and supporting staff of the Department of IT and all other departments who have been helpful directly or indirectly in making our project a success.

We are extremely grateful to our parents for their blessings and prayers for the completion of our project that gave us strength to do our project.

With regards and gratitude

SHABBIR ANSARI – 230022806

DECLARATION

We hereby declare that the major project titled **"University management System"** submitted to Hierank Business School, affiliated Chaudhary Charan Singh University, Meerut for the award of the degree of Bachelor of Computer Application is a result of original work carried out in this project. It is further declared that the major project report or any part thereof has not been previously submitted to any University or Institute for the award of degree or diploma.

SHABBIR ANSARI – 230022806

ABSTRACT

The University Management System is a comprehensive full-stack web application developed to streamline and automate administrative, academic, and management processes within educational institutions. This project addresses the critical need for efficient digital infrastructure by implementing an integrated solution that connects various stakeholders including administrators, teachers, and students through a modern, accessible web interface.

The system is architected using **Python 3.13** for backend development and business logic implementation, **Streamlit** for rapid web interface generation, and **SQLite** for lightweight yet robust data storage and retrieval operations. The primary objective is to enhance operational efficiency, minimize manual administrative burden, and facilitate data-driven decision-making through integrated AI/ML analytics.

The application encompasses five core modules that form the backbone of university operations. The **Student Management** module maintains comprehensive student records including enrollment data, contact information, and academic progression monitoring. The **Marks Management** module tracks internal and external assessments with automatic grade calculation and performance analysis. The **Fee Management** module monitors tuition payments, pending balances, and payment status across semesters. The **Attendance Management** module calculates attendance percentages and identifies students below institutional thresholds. The **Teacher Management** module maintains faculty information, qualifications, and departmental assignments.

A key innovation of this system is the integration of **AI/ML analytics** for predictive insights including student performance forecasting, at-risk student identification, and attendance pattern analysis. Student **Portal** provides personalized dashboards where students can access their academic records, marks, fees, and attendance information in real-time, promoting transparency and self-monitoring.

The system employs **three-tier architecture** separating presentation, business logic,

and data layers, ensuring scalability, maintainability, and future extensibility. **Role-Based Access Control (RBAC)** implements distinct user roles for administrators, teachers, and students, each with appropriately restricted permissions. Security is enforced through **SHA-256 password hashing** and session management. The implementation features interactive data visualizations using **Plotly**, comprehensive Excel export capabilities, and an intuitive user interface requiring minimal training.

This full-stack solution transforms traditional manual processes into an efficient digital ecosystem, fostering an improved educational environment conducive to academic excellence and administrative effectiveness. The open-source nature of the project, with complete source code available on GitHub, promotes transparency, collaborative improvement, and educational value for the development community.

Keywords: University Management System, Full-Stack Web Application, Streamlit, Python, SQLite, Machine Learning, Role-Based Access Control, Student Portal, Data Analytics, Educational Software.
